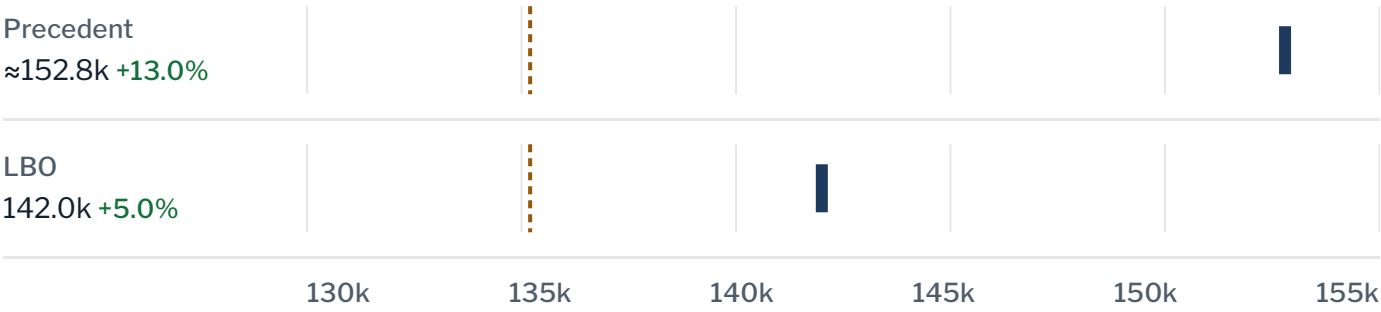
BMP

Building Materials · Precedent Transactions, LBO

Binh Minh Plastics

BMP valuation distinguishes financial-sponsor affordability from strategic control value.

BMP, VND per share



Outputs, VND per share

Precedent	≈152.8k	+13.0%
LBO	142.0k	+5.0%
Price used	135.2k	11 Jun 2026

Key assumptions

Precedent model	Control-premium transaction analysis
LBO model	Sponsor-return model
Control premium	5.0% in LBO; 13.0% precedent median
Exit / return hurdle	7.5x exit EV/EBITDA; 20.1% IRR
Why methods differ	Precedent above LBO

Conclusion

BMP now shows a clear control-value spread: LBO is the financial-sponsor case at VND 142.0k/share, while precedent transactions imply a higher strategic/control value around VND 152.8k/share.

Key risks

1. A lower exit multiple or weaker EBITDA path would compress the LBO offer quickly.
2. Sponsor financing terms, interest costs, and leverage availability can change the clearing price.
3. Precedent transaction samples can be stale or structurally different from BMP, so the premium output is a guide rather than a hard target.
