FPT

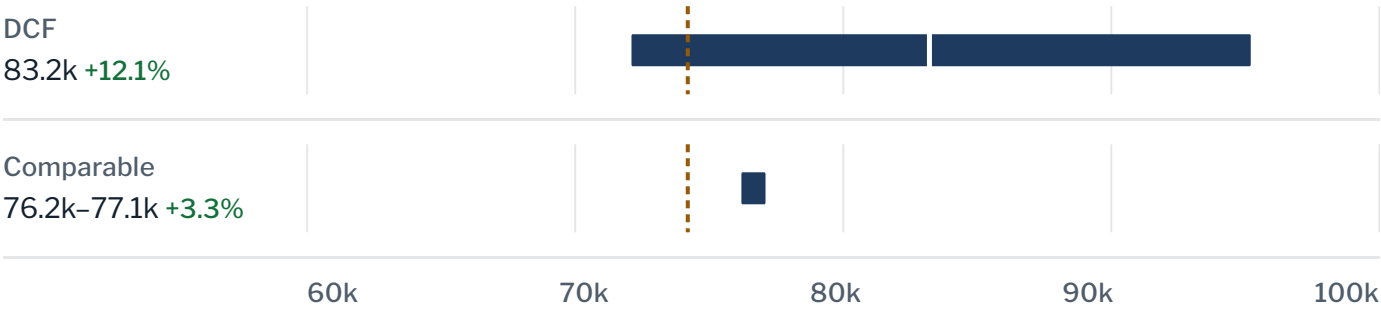
Technology & IT Services · DCF, Comparable Analysis

FPT Corporation

FPT valuation separates the long-duration growth case from the public-market multiple check.

FPT, VND per share

Price used 74.2k, 11 Jun 2026



Outputs, VND per share

DCF	83.2k	+12.1%
Comparable	76.2k–77.1k	+3.3%
Price used	74.2k	11 Jun 2026

Key assumptions

DCF model	FCFF DCF
Discount rate / terminal value	WACC 10.5%; exit EV/EBITDA 8.5x
Operating case	Revenue growth 12.0% to 8.0%
Comparable set	Tech, IT services, telecom peers
Why methods differ	DCF higher; comps lower

Conclusion

FPT now shows the intended split: DCF is the growth-upside case, while comparable analysis is the tighter public-market multiple check.

Key risks

1 A lower terminal multiple has a large impact because the company is valued as a duration growth asset.

2 IT-services growth, wage pressure, FX, and overseas demand are the main operating sensitivities.

3 Comparable valuation can compress if global technology multiples derate.
