HPG

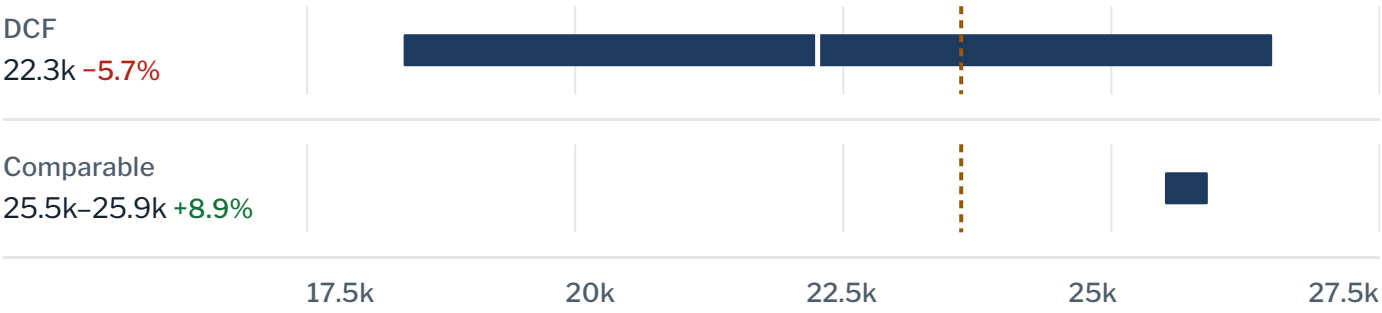
Steel & Industrial Materials · DCF, Comparable Analysis

Hoa Phat Group

HPG valuation deliberately separates intrinsic steel-cycle risk from public-market normalized earnings.

HPG, VND per share

Price used 23.6k, 11 Jun 2026



Outputs, VND per share

DCF	22.3k	−5.7%
Comparable	25.5k–25.9k	+8.9%
Price used	23.6k	11 Jun 2026

> Is the market pricing HPG as a normalized steel-cycle recovery story, or should cash-flow risk keep the valuation discounted?

Key assumptions

Revenue growth path	14.0% to 4.0%
COGS/sales normalization	80.0%
Capex/sales	Falls to 4.0%
WACC	10.5%
Exit EV/EBITDA	9.0x

Conclusion

HPG should be read as a valuation range, not a single target price. DCF is the conservative intrinsic anchor; comparable analysis is the market-implied normalized earnings case.

Key risks

1. Steel spread compression or slower utilization would pressure the DCF fastest.
2. Lower capex or stronger working-capital release would lift free cash flow and narrow the gap between DCF and comparable value.
3. Comparable value can move quickly if the peer multiple set derates with China steel demand or Vietnam property sentiment.
