BID

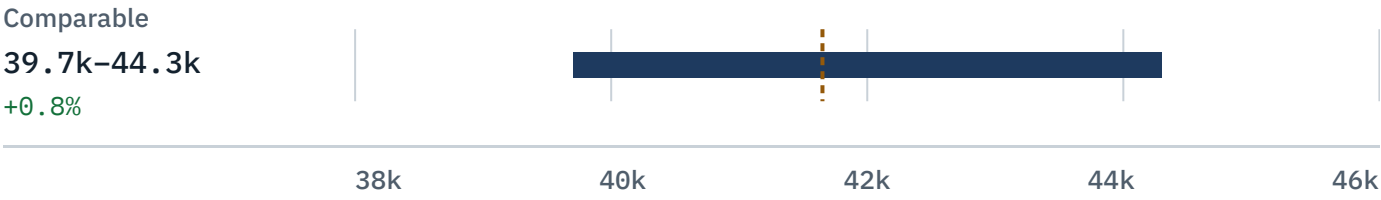

Banking · Comparable Analysis

BIDV

BID valuation is a bank peer-multiple exercise with a visible downside/base/upside band.

BID, VND per share

Range or estimate | Price used 41.7k, 11 Jun 2026

Outputs, VND per share

Comparable	39.7k–44.3k	+0.8%
Price used	41.7k	11 Jun 2026

> Is BID fairly valued inside the listed-bank peer range, or should asset quality, ROE, and provisioning risk shift the stock toward the low end?

Key assumptions

Peer set	**Vietnam listed banks**
Multiple framework	**P/E medians**
LTM earnings	**6.1x selected P/E**
Forward earnings	**9.4x 2026E; 9.1x 2027E**
Output framing	**Range, not point estimate**

Conclusion

BID should be read as a peer-based valuation range. The current model checks whether BID sits inside the listed-bank multiple frame; it does not yet replace a full bank valuation model.

Key risks

1. Credit-cost normalization can make forward earnings too optimistic or too conservative.
2. State-linked bank valuation can be affected by policy lending, capital raising, and foreign ownership constraints.
3. A pure P/E framework is less complete than a full P/B-ROE bank valuation, so the result should be used as a peer check.
